

# fully tailored Internet solutions for business

## Your one-stop IT services company for web hosting, software development and cloud services

Welcome to Webstream, your specialist application services provider. We don't adhere to the common hosting provider business model. To us, it's not about large customer volumes, 'long wait' support lines and 'one size fits all' hosting implementations that live in Australia, the USA or elsewhere.

We excel at providing scalable, fully customized New Zealand-based system solutions that truly meet your business outsourcing needs. Our primary focus is on technology virtualization, backed by first-class ongoing support. Today, with nearly fifteen years experience under our belts, we provide hosted and cloud-based solutions to some of New Zealand's largest companies. Very often we've designed, written and integrated the software applications too.

### Overview

#### **Business-class web and application hosting**

We offer shared, virtual and dedicated server hosting for Microsoft and open source platforms from our Tier-1 Auckland data centre with up to 100 MB/s PIR connectivity. Fully managed firewall and VPN services and 24-hour monitoring is standard, together with expert hands-on support.

#### **Fully managed offshore hosting too**

In addition to our Auckland data centre facility, we also have fully managed servers in Dallas, Texas and Slough, United Kingdom. We can provide fully managed and monitored virtual servers in these locations plus the Bahamas and Hong Kong.

#### **Virtualization and Cloud services**

Webstream was an early entrant into the virtual hosting arena. We currently provide and manage over 100 VMWare and Microsoft virtual servers for customers throughout New Zealand. Working in conjunction with our business partners we also provide integrated and fully managed desktop and application services via the Cloud.

#### **Software design and development**

We have a ten year track record of supplying successful software solutions to New Zealand businesses. Our team of consultants and developers have the hands-on skills and experience required to build and deliver complete web-based solutions for Microsoft and Linux platforms. Our primary focus is on .NET/SQL web applications written in C#, plus web services integration with other systems.

#### **Web Design**

Using specialist designers and in-house skills, Webstream provides a complete Web site design and implementation service. The Company supplies the creative, technical, content authoring and marketing skills required to create compelling, user-friendly Web sites that also create good business returns.

#### **Content Management**

We specialize in DotNetNuke, Drupal, WordPress and Joomla based solutions. A range of pre-built application modules is available for content management, product databases, secure payment processing and back-end system integration.

## More on our services

### System Consulting

Webstream's senior consultants have extensive experience in systems design and solutions architectures. We work with customers and technology partners as required. We understand the demands of prototyping, testing, implementation, project management and return on investment.

*Our services include:*

- IT consulting for business
- Requirements analysis
- Systems architecture
- Functional/technical specifications
- Software development
- Deployment & project management

### Software Development

Webstream delivers fully supported industrial-strength software solutions.

The team specializes in the following specific skill sets:

- Microsoft Windows 2008, 2003, Windows 7, Vista & XP
- Microsoft.NET, ASP.NET, in C# and VB
- Linux / PHP
- DotNetNuke, Joomla, WordPress & Drupal CMS
- Microsoft SQL 2005 & 2008 design & development
- Oracle design, development & support
- HTML, Java, XML, CSS, DHTML, AJAX, Flash
- Online payment integration to DPS, BNZ, ANZ and US providers
- Photographic imaging and pre-press systems
- Microsoft Dynamics AX/NAV integration
- EDI integration

### Software Product Support

Webstream has a successful 10-year record of providing dedicated ongoing support and development to its software customers, throughout the life of the product. The Company operates a fully manned support desk during business hours and is able to offer 24 hour x 365 day coverage for business customers wishing to extend their support contracts.

### Hosting Infrastructure

Webstream currently provides commercial web site and application hosting and co-location services to about 300 customers in New Zealand, Australia and the UK. We support Microsoft, Linux and VMWare platforms. The Company's Tier-4 Auckland data centre is supported by multiple redundant fibre circuits and is fully protected by secure site access, UPS and emergency generator.

Webstream provides a range of ancillary hosting support services including redundant fully managed Cisco ASA firewalls and switches, IPSec VPN access, Microsoft ISP software licensing, backup SAN servers and 24 x 7 server uptime monitoring with proactive call-out.

### Business Hours & 24 x 365-Day Support

The Webstream Support Desk is fully manned for normal hosting and software support calls between the hours of 08.00 to 18.00 Monday to Friday. In addition, the Webstream 24-hour Help Desk provides access to the duty engineer round the clock, 365 days per year, for business customers with extended support contracts.
